

# CORE™

**Compelling mobile services  
begin with a strong foundation**

- Accelerate time to market
- Create a quality user experience
- Reduce operational costs and resources
- Build and scale your services with a modular architecture

## Custom Application Development

To further accelerate your time to market, PV offers start-to-finish application development. PV can develop all or part of your custom service offering. The applications will be built on CORE so that you can still have the flexibility and scalability to add to your services in the future.
